Hi George,

This additional information is very helpful. I am polling now to see how many folks might be interested. I'd appreciate it if you could send the slide set. I will need to work with our contracts and training offices to learn what procedures we need to do to formally identify a vendor and secure a contract.

Thanks,

Jeanne

Jeanne,

There are at least two options – the first is a US government course at your facility with SPE providing the instructor (me) and all the materials and EPA providing the room. It would be open to anyone you invite. The charges are shown below. The second is public course that SPE could locate in a hotel in DC and hope to fill with interested parties – this second option would only go forward if we had enrolment of at least 20 people. For the first option, I would suggest a 50 person upper enrolment limit. Terms are in the SPE note below.

I can send the slide set if you would like to see it.

George

George,
We can offer \$25,000 for an in house class for up to 20 people and anyone above the 20 will be an extra \$1200/person. This is our special government pricing, regularly our 2-day courses are \$1400/person.

Best Regards,
Chiwila

George,

We can offer this to EPA as an in-house course. For a set fee they would guarantee so many people in the course. I can work the details out and send them to you tomorrow so you can have talking points when you next meet with them.

Best Regards,
Chiwila

I don't know the answers to these questions. Any ideas?

Diane,

See the following note from EPA – Looks like they are interested in a course specifically for the EPA (maybe other agencies as well). Has SPE done this before? Guidelines?

Subject: SPE HF course

Hi George,

It was good to see you at the recent NSF workshop. We would be interested in having the SPE course on hydraulic fracturing in shale presented at EPA in Washington. Is there a convenient time we could talk in the next week or so, so I can gather more information so I may figure out with our admin folks on how we might proceed with this?

Thanks,

Jeanne
